

Point Care Accountability Acknowledgement for 2021-2022

As the Point Care policies are new and students will be struggling with many new changes this year, every effort will be made to be educational in approach and seek to avoid discipline situations. However, due to the importance in adhering to Point Care policies, and the potentially significant impact violations could have upon the health and wellbeing of all members of the community, there will be occasions when repeat offenders or significant violations will need to be addressed with sanctions. In those cases, Student Life adjudicators will operate under the following guidelines:

1. Violations of Point Care policies will be considered behavioral in nature, and as such will fall under the Point Discipline System outlined within The Point Community Honor Code.
2. The following violations are examples of violations which will be considered Minor offences under the Point Discipline system:
 - a. Failing to wear a mask in a required area.
 - b. Failing to complete the Daily Symptom Tracker in eRez either (1) daily for the 10- or 14-day quarantine period or (2) the 3-5 days if you are vaccinated and are exposed. Screen must be completed by 12:00 p.m. EST or 30 minutes prior to first event of day, whichever is earlier (i.e., practice, class).
 - c. A residential student staying overnight in a room to which they are not assigned.
3. The following are examples of violations which will be considered Major offences under the Point Discipline system:
 - a. Intentionally falsifying information on the Daily Symptom Tracker in eRez.
 - b. Bringing a non-Point guest into a living area.
 - c. Failing to provide positive COVID-19 test result to Sports Medicine and/or Point Care within 24 hours of receipt.
4. The following is an example of violations which would be considered Double Major offences under the Point Discipline system:
 - a. Intentionally falsifying COVID-19 test results and providing them as medical evidence (submitting a known false negative or positive to achieve a desired outcome: i.e., return to campus when it is unsafe to do so, or be unnecessarily quarantined).
 - b. Other risky or dangerous behavior taken to intentionally expose other student(s) to the COVID-19 virus.
